Real Data Project — Grade 3 Lesson Guide

Get ready to explore real data and become **data detectives**! In this lesson you will collect, organise, and discover amazing things using numbers and charts. Are you excited? Let's begin our adventure!

■ Learning Objectives

- | | |
|---|--|
| 1 | Understand what data is and give real-life examples. |
| 2 | Collect data by counting, measuring, and tallying. |
| 3 | Organise data into neat tables and tally charts. |
| 4 | Read and interpret bar graphs to identify patterns. |
| 5 | Present data findings clearly to an audience. |

■ Curriculum Links

- Data Handling — collecting, organising, and interpreting data
- Number Sense — counting, tallying, and comparing numbers
- Communication — presenting findings with charts and spoken explanations

■ What is Data?

Data is **information we collect and use to learn!** It comes in many forms:

Type of Data	Example
Numbers	How many friends came to school today
Pictures	Drawings of today's weather
Words	Your favourite colour

■ Real Data Around Us

We see and use data **every day!** Here are some examples:

■ ■ Weather Charts	Tell us if it will rain or shine today.
■ Attendance Sheets	Count how many students came to school.
■ Market Counting	Counting fruits and vegetables at the market.
■ ■ Dinner Planning	Thinking about what everyone likes to eat.

⇒ ■ Quick Check — What do YOU notice?

Look around your classroom right now. Can you spot **3 examples** of data? Write them below and share with a partner.

1. _____
2. _____
3. _____

■ Let's Collect Some Data!

Being a data detective is **fun and easy!** You can collect data about things you see every day. Use a clipboard and paper to write down what you find. Remember to count carefully and keep your notes neat!

■ Favourite Colours

Ask your classmates: what is your favourite colour?

■ Height of Friends

Measure how tall each friend is using a ruler.

■ Daily Weather Tally

Each morning, mark today's weather: sunny / cloudy / rainy.

■ Organising Data

Once you have collected your data, organise it so it is **easy to read**. Tally marks are a great way to count — then transfer the totals into a table:

Raw Data (Tally Marks)	Organised Data (Table)
Apples: (5)	Apples → 5
Bananas: (3)	Bananas → 3
Mangoes: (7)	Mangoes → 7
Oranges: (2)	Oranges → 2
Grapes: (4)	Grapes → 4

■ Reading Data — Bar Graphs

A **bar graph** makes it easy to compare data at a glance. Each bar represents one category. The taller the bar, the bigger the number.

Key Insight: Mangoes are the most popular fruit — look at the tallest bar! Data helps us see patterns and make comparisons easily.

■ Sample Challenge Question

Count how many students like different sports and turn the tally chart into a bar graph:

Sport	Tally Marks	Total
Cricket	(10)	10
Football	(8)	8
Badminton	(5)	5
Kabaddi	(7)	7

Answer: Cricket is the most popular sport in our class!

■ Your Maths Challenge Tasks

In this challenge, you will become real data detectives! Your mission:

Step 1	Collect	Collect data from friends and family using tally charts.
Step 2	Organise	Organise your data into neat tables and charts.
Step 3	Read	Read what your data tells you — find the most/least popular!
Step 4	Present	Present your findings to the class with confidence.

■ Student Project Ideas

■ Favourite Snacks Tally	Survey your class about their favourite snacks and make a bar graph.
■ Class Pet Survey	Find out which pet everyone would love to have in the classroom.
■ Weather Tracking for a Week	Record the weather every morning for one week and show it in a chart.
■ Plant Growth Measurement	Measure a plant's height every day and track its growth over time.

■ Tips for Success

- Take your time collecting data — no rush!
- Keep your data **neat and organised** in tables.
- Use colours and pictures to make your data fun and eye-catching.
- Always ask questions about what your data tells you.
- Being curious helps you discover exciting patterns and stories hidden in your numbers!

■ How to Present Your Data

Colourful Posters	Use bright colours to highlight important numbers in your charts.
--------------------------	---

Digital Slides	Create a neat presentation with labels and titles on each slide.
Pictures & Labels	Add drawings or photos so everyone can understand at a glance.
Practice First	Practise explaining your findings out loud before presenting.

Thank you for joining the Maths Challenge! ■ Now go out and be an amazing data detective!
