

THE DIGITAL IDENTITY CARD

How Websites Remember Who You Are!

Planrs Academy Master Course

Think About It...

Have you ever wondered why Amazon or Netflix doesn't ask for your password every single time you click on a new page?

Imagine if every time you turned a page in a book, the book asked, "Who are you? Prove you're allowed to read this!" That would be very annoying, right?

"How do websites know it's still you browsing, even after you've logged in once?"

Let's find out the secret magic behind how websites remember you!

Who Are You? vs Prove It!

1. Identification

This is simply telling someone who you are.

Example: "I am a student at Planrs Academy." It's like saying your name when a teacher asks!

2. Authentication

This is **proving** you are who you say you are.

Example: Showing your school ID card with your photo and the Principal's signature.

In the digital world, your **Password** is your proof. But we can't keep showing it every second!

Sessions: The Wristband Secret

Imagine you go to an amusement park like **Wonderla**. At the gate, you pay once and show your ticket.

Instead of making you carry that ticket to every single ride, they give you a **Wristband**.

- **Pay once, get a wristband.**
- No need to show your ticket at every ride.
- The ride operator sees the wristband and knows you've paid!

A "Session" on a website is just like that wristband. It remembers you while you visit!

Tokens & JWT: The Metro Pass

Think about the **Metro Token** in cities like Delhi or Bengaluru. That small plastic coin holds special information:

- Where you started your journey.
- Where you are allowed to go.

Websites use something called **JSON Web Tokens (JWT)**. These are like digital coupons or passes that tell the website exactly what you are allowed to do!

Your Digital Pass: Just like a Metro token, a JWT allows you to access different parts of a website without starting over.

The Aadhaar Card

In India, we have a very special "Digital Key" called the **Aadhaar Card**.

- It is a **Unique 12-Digit Number**.
- It provides safe authentication for over **1.3 Billion Indians!**

Aadhaar helps prove who you are safely both online and offline. It's like a super-secure digital ID that works everywhere in the country!

Apps with Magic Memory

Have you noticed how **Hotstar** or **JioCinema** remembers exactly which movie you were watching last night?

They pick up right where you left off! How?

Sessions + Tokens = Magic Memory!

By working together, Sessions and Tokens keep track of your progress like a helpful bookmark that never falls out of your book.

The ID Card Designer

It's your turn to be a developer! Draw your own digital token or badge in the space below. Include these details:

1. **Draw** a cool shape (Star, Shield, or Hexagon).
2. **Write** your Name on the Token.
3. **Write** your Age (this is called a "Claim").
4. **Set** your Access Level (Member or VIP?).
5. **Add** bright colors!

How You Get Your Key

Step 1: Login

You enter your **Username** and **Password** on the website. This is you proving who you are for the first time.

Step 2: Get Your Key

The website server checks your password. If it's correct, it gives you a **Digital Key (JWT)** to keep in your browser.

Step 3: Access!

Now, whenever you click a new page, your browser "shows" that key automatically. You can visit everything without typing your password again!

Staying Logged In: Safe or Not?

The Good Side (Convenience)

No need to type your password again and again. It saves so much time!

The Careful Side (Security)

Your "Wristband" or "Digital Key" keeps your data safe, but only if **YOU** are the one using it.

CRITICAL RULE: *Never share your digital "Wristband" on public computers.
Always **LOG OUT** when you are finished!*

What Did We Learn?

Can you match these correctly?

 **Sessions** are like... (Wristbands / Metro Tokens)

 **Tokens** are like... (Digital Keys / School ID)

 **Aadhaar** is for... (1.3 Billion People / Only Apps)

Key Takeaway: Protect your digital passes just like you protect your house keys or your favorite toys!

Fun Facts!

- India has issued more Aadhaar cards than the entire population of most countries!
- Metro tokens are being replaced by **Smart Cards** which are basically long-term tokens!
- Without Tokens, you would have to log in to Hotstar every time you paused a video!

THANK YOU!
