

PLANRS ACADEMY MASTER SERIES

DIGITAL DETECTIVES

Spotting the Unreal in an AI World

Grade 6 | Session 1: Ethics of AI

The Impossible Speech

Imagine watching a video of your favorite Indian actor. In just one minute, they speak fluently in **Hindi, Tamil, Telugu, Bengali, and Marathi!** [cite: 86]

Their lips move perfectly with every word. Their voice sounds exactly like it should. [cite: 87]

"Wait a minute... does this actor really speak ten different languages fluently?" [cite: 85, 88]

Is this a real achievement, or are you looking at a **digital mask?** [cite: 88, 96]

What are Deepfakes?

Deepfakes are videos or audio recordings created by AI that look or sound real but are actually **fake**. [cite: 95]

Think of it as a **Digital Mask**. AI uses a computer to "wear" someone else's face or voice, hiding the real person underneath. [cite: 96]

Just like a magician uses tricks to make things disappear, AI uses math to make people say things they never actually said. [cite: 86, 95]

How Does AI Do It?

AI creates deepfakes by watching thousands of videos. It learns exactly how a person's face moves, how their eyes blink, and how their voice sounds. [cite: 99, 100]

"It's like Mirror Magic. The AI creates a reflection that looks real, but it's just a digital trick!" [cite: 102, 103]

The "Learning" Process:

- The AI studies lip movements. [cite: 100]
- It records specific voice patterns. [cite: 100]
- It recreates expressions perfectly. [cite: 100]

Signs of a Digital Mask

1. Weird Eyes

Watch for **unnatural blinking**. Sometimes deepfakes have eyes that don't move right or look "stuck." [cite: 107, 108]

2. Robotic Voice

Listen closely! Does the voice sound a bit odd or robotic? Does the sound match the lip movements perfectly? [cite: 109, 110]

3. Strange Shadows

Look at the edges of the face and the background. Deepfakes often have **blurry edges** or weird, flickering shadows. [cite: 111, 112]

Real Photo vs. AI Fake

Can you tell the difference? Use your detective skills to find the "glitches" in the digital mask.
[cite: 114, 115]

✓ The Real Photo:

- Natural eyes and blinking. [cite: 116]
- Smooth, clear movements. [cite: 116]
- Background is crisp and clear. [cite: 116]

X The AI Deepfake:

- Unnatural or "disnatural" expressions. [cite: 117, 122]
- Odd shadows around the chin or hair. [cite: 117]
- Blurry edges where the "mask" meets the background. [cite: 117]

The Speed of Misinformation

Misinformation is fake news or false messages that spread very quickly online—often through apps we use every day. [cite: 123, 124]

"Like a digital wildfire, once you press 'forward', it's hard to take it back!" [cite: 149, 150]

Common Example: A WhatsApp message claiming "School is closed tomorrow due to rain" when it's actually not true. [cite: 125, 138]

The WhatsApp Test

Imagine a viral message spreads in Priya's family group about schools closing. [cite: 138]

Instead of believing it immediately, Priya's family decides to be **Digital Detectives!** [cite: 139]

The Detective Steps:

- Check the **official** school website or news sources. [cite: 140]
- Ask a **parent or teacher** to verify if the message is real. [cite: 141]
- Never forward a "shocking" message until you are 100% sure. [cite: 148, 160]

Why We Must Be Careful

1. It's Hard to Take Back

Once you share something online, it spreads fast. You can't just "un-send" it once everyone has seen it! [cite: 149, 150]

2. It Can Hurt Feelings

Sharing fake news can cause confusion and even hurt the feelings of your friends and family. [cite: 151, 154]

3. Protect Your Circle

Being a Digital Detective helps protect the people you care about from being tricked by *nakli* media. [cite: 152, 155, 160]

THE DETECTIVE PLEDGE

Raise your hand and say it with us! [cite: 158]

**"I will look closely for digital masks and check with adults
before sharing." [cite: 159]**

**"I will not forward strange messages without proof and will
help others spot fake news!" [cite: 160]**

Welcome to the Team! [cite: 157]

Detective Challenge!

What would you do if you saw a video of your favorite singer promoting a strange app?
[cite: 168]

Apply the Detective Checklist:

-  Is this really them, or is the voice robotic? [cite: 110, 169]
-  Does something look strange around their eyes or mouth? [cite: 108, 170]
-  Have I checked with an adult before believing it? [cite: 170]

Real detectives always investigate before they believe! [cite: 171]

Recap: Spotting the Unreal

- **Deepfakes:** AI-made "nakli" videos that are digital masks. [cite: 165]
- **Signs:** Weird blinking, robotic voices, and blurry backgrounds. [cite: 166]
- **Misinformation:** False news that spreads fast. [cite: 166]
- **Action:** Always pause, think, and check before you share! [cite: 166, 169]

YOU ARE READY! 

Keep your eyes sharp and stay curious!

ANY QUESTIONS?

Our investigation doesn't have to end here!

Talk to your teacher or classmates about any digital tricks you've spotted lately! [cite: 172]
