

LARGE LANGUAGE MODELS — HOW CHATGPT WORKS

PREDICT

MEET YOUR AI ASSISTANT

What is ChatGPT?

ChatGPT is not a robot or a person. It's a super-smart predictor that guesses what word comes next! Think of it as a clever helper that has read millions of sentences.

**It predicts words to help
you write and learn!**

WHAT IS A LARGE LANGUAGE MODEL?

Understanding LLMs

A Large Language Model is a computer program that understands and writes text like humans do — by predicting the next word!

**Key words: Predict,
Pattern, Library**

HOW DOES IT LEARN? THE ANTAKSHARI ANALOGY

Learning Through Patterns

Just like in Antakshari, where one word leads to another, LLM learns patterns by reading millions of sentences. When you sing a song ending with "na," the next person must start with "na" — that's pattern recognition!

The AI reads so many sentences that it learns which words usually follow other words!

THE AUTOFILL ANALOGY

Super-Powered Smartphone

It's like your phone's autofill but super-powered! Type 'Happy...' and it might suggest 'Diwali' or 'Birthday' because it has seen millions of examples.

LLMs predict words much faster and smarter than any phone!

THE DIGITAL LIBRARIAN WITH A GLOBAL BRAIN

Imagine a librarian who has read every book in every school library in India. They can guess what words come next in sentences about Indian History or Science!

ChatGPT is like this super-librarian with a brain full of books.

It uses patterns from millions of texts to predict helpful answers.

TRAINING DATA — THE GIANT LIBRARY

Where does ChatGPT learn from? It reads billions of sentences from a giant digital library to understand patterns in language!

Billions of sentences from books and newspapers like The Hindu and Times of India.

Indian English phrases and names of local foods like Samosa and Dosa.

Stories about famous Indian historical figures like Mahatma Gandhi and Rani Lakshmibai.

NEXT-WORD PREDICTION GAME

How It Works

Let's play a guessing game! Can you predict what word comes next in these famous Indian phrases? Think about what you've heard before.

"My India _ _ _ _" and "Truth alone
_ _ _ _" — Can you guess?

INDIAN PHRASE EXAMPLES

See how pattern recognition works with familiar Indian phrases! Just like ChatGPT, you can predict what comes next.

"My India (My Mother India)

"Truth alone " (Truth Alone Triumphs)

ACTIVITY — BE A PROMPT ENGINEER!

Write Clear Instructions for ChatGPT

You are the "Prompt Engineer"! The clearer your instructions, the better ChatGPT's answers will be. Think about what you want to know and ask in simple, specific steps.

Example: "Tell me how to make Masala Chai in 3 simple steps."

PRACTICE YOUR PROMPTS

Now it's your turn! Try writing these prompts to ChatGPT and see what creative responses you get.

Write a greeting for Pongal festival.

Explain how to make Samosa in 2 steps.

Tell me a fun fact about Mahatma Gandhi.

WHAT DID WE LEARN TODAY?

Recap Time!

Let's remember the important things we discovered about how ChatGPT works!

ChatGPT is a super-smart predictor of the next word.
It learns from reading lots of books, newspapers, and websites.
Clear instructions (prompts) help ChatGPT give useful answers.

THANK YOU & QUESTIONS!

Now you know how ChatGPT predicts words just like magic! Keep exploring, keep learning, and remember — the best answers come from asking great questions.

STAY CURIOUS, ASK QUESTIONS, AND USE AI RESPONSIBLY!
