

Let's Explore Soil! Feel & Compare Different Types

Let's Begin!

Explore Now!

What is Soil?

The ground beneath our feet is very special! Soil is made of tiny pieces of rocks, bits of plants and leaves, and water. Let's discover what makes soil so amazing!

Why Soil is Important

Soil helps plants grow big and strong! It gives them food and water. Without soil, we wouldn't have trees, flowers, or yummy vegetables to eat!

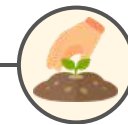

Three Types of Soil

Feel & Compare

Clay Soil

Clay soil feels smooth and sticky when wet. It holds water and can be shaped like playdough!

Sandy Soil

Sandy soil feels rough and grainy like sand at the beach. Water flows through it very quickly!

Loamy Soil

Loamy soil feels soft and crumbly in your hands. It's the best soil for growing plants and vegetables!

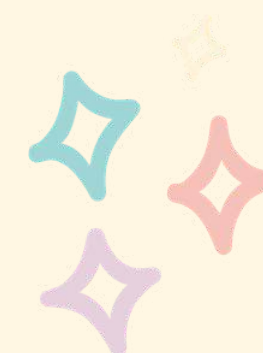

Feel & Compare! Soil Textures

Touch Test Activity

Pick up a handful and squeeze it gently
Does it stick together or fall apart?
Is it smooth, gritty, or sticky?

Wetness Check

Add a few drops of water to each soil sample
Watch how fast the water soaks in or stays on top
Feel if the soil becomes muddy, crumbly, or slimy!

Remember These Fun Facts!

- ✓ Sandy soil is gritty and rough
- ✓ Clay soil sticks together
- ✓ Loamy soil is best for plants
- ✓ Each soil feels different!

Let's Review! ➤

Great Job, Soil Scientists!

You learned to feel and compare different soils. Now go explore the soil in your garden!

-  TOUCH THE SOIL!
-  Feel the textures!
-  Discover what grows in your garden!

Keep Exploring!
