

The background features a central cream-colored area surrounded by large, soft-edged organic shapes in purple, teal, light blue, and peach. Black line-art branches with leaves or buds are positioned in the corners.

AI IN HEALTHCARE

How Computers Help Find Cancer

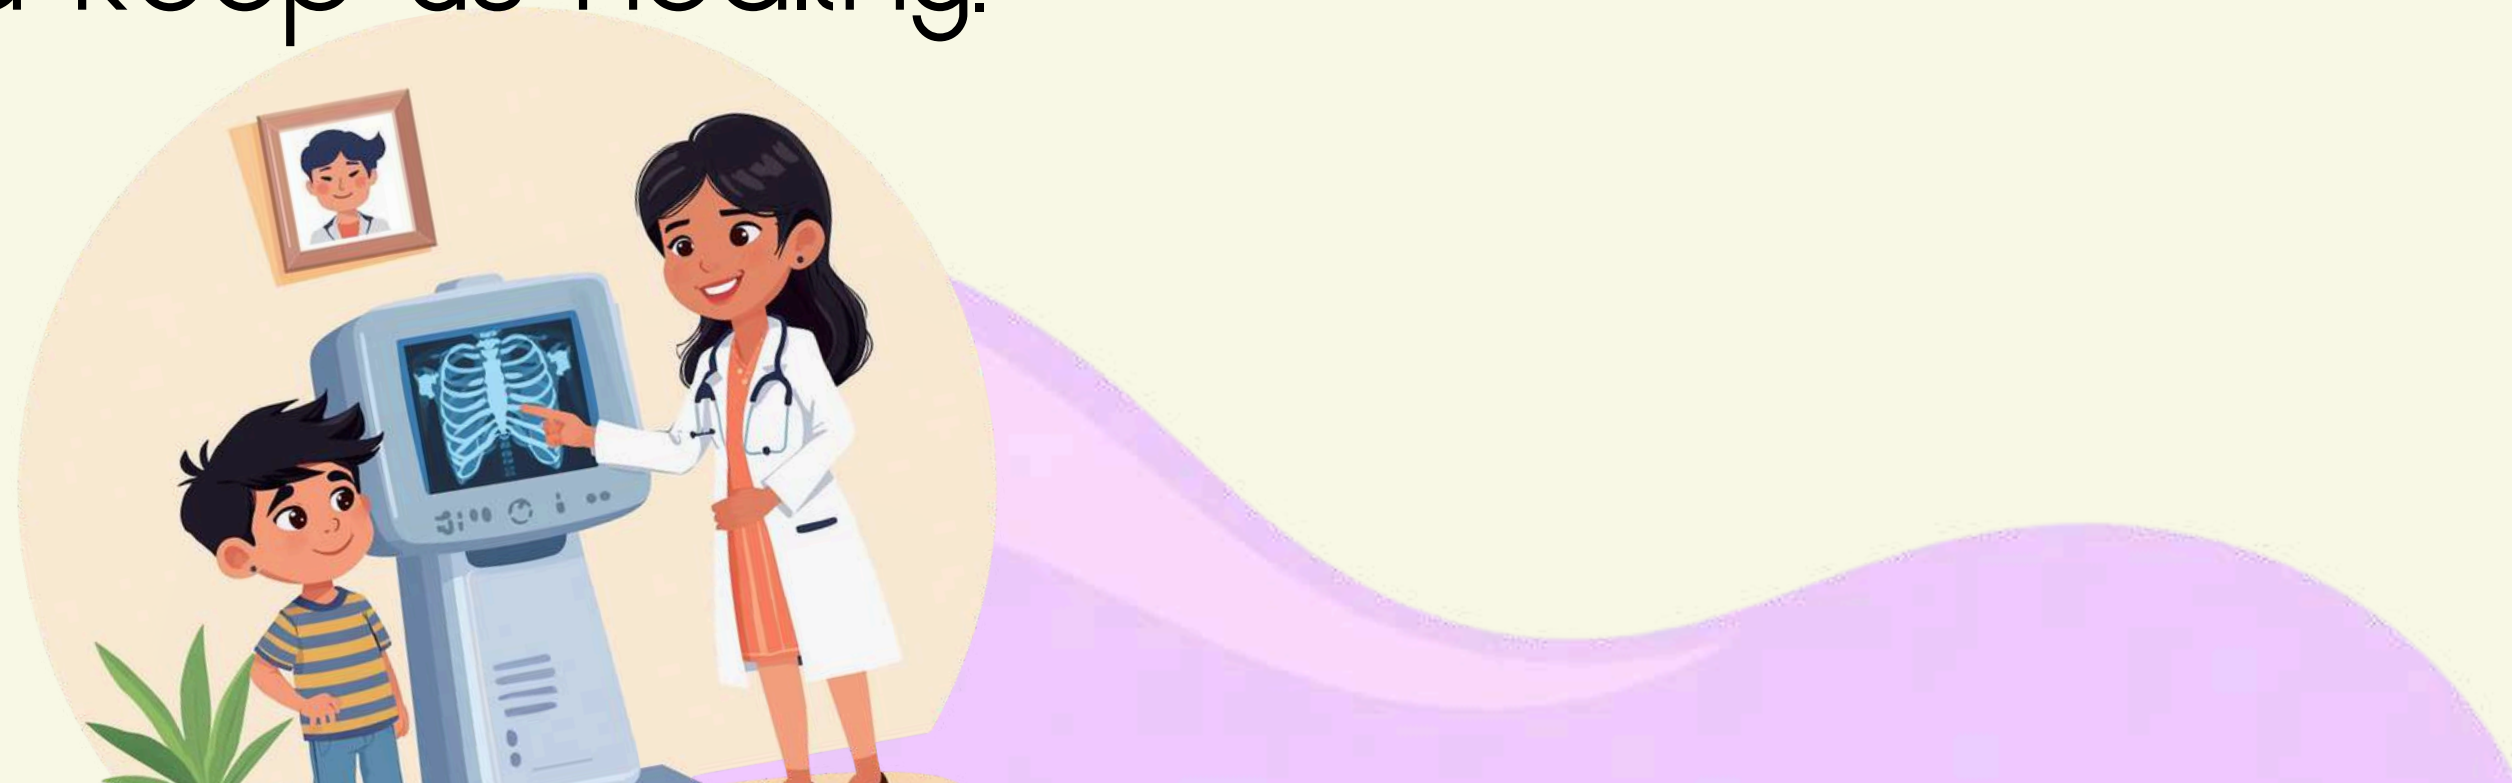

WHAT IS AI?

AI means teaching computers to think and learn like people! You already know AI from voice assistants like Alexa and fun video games!

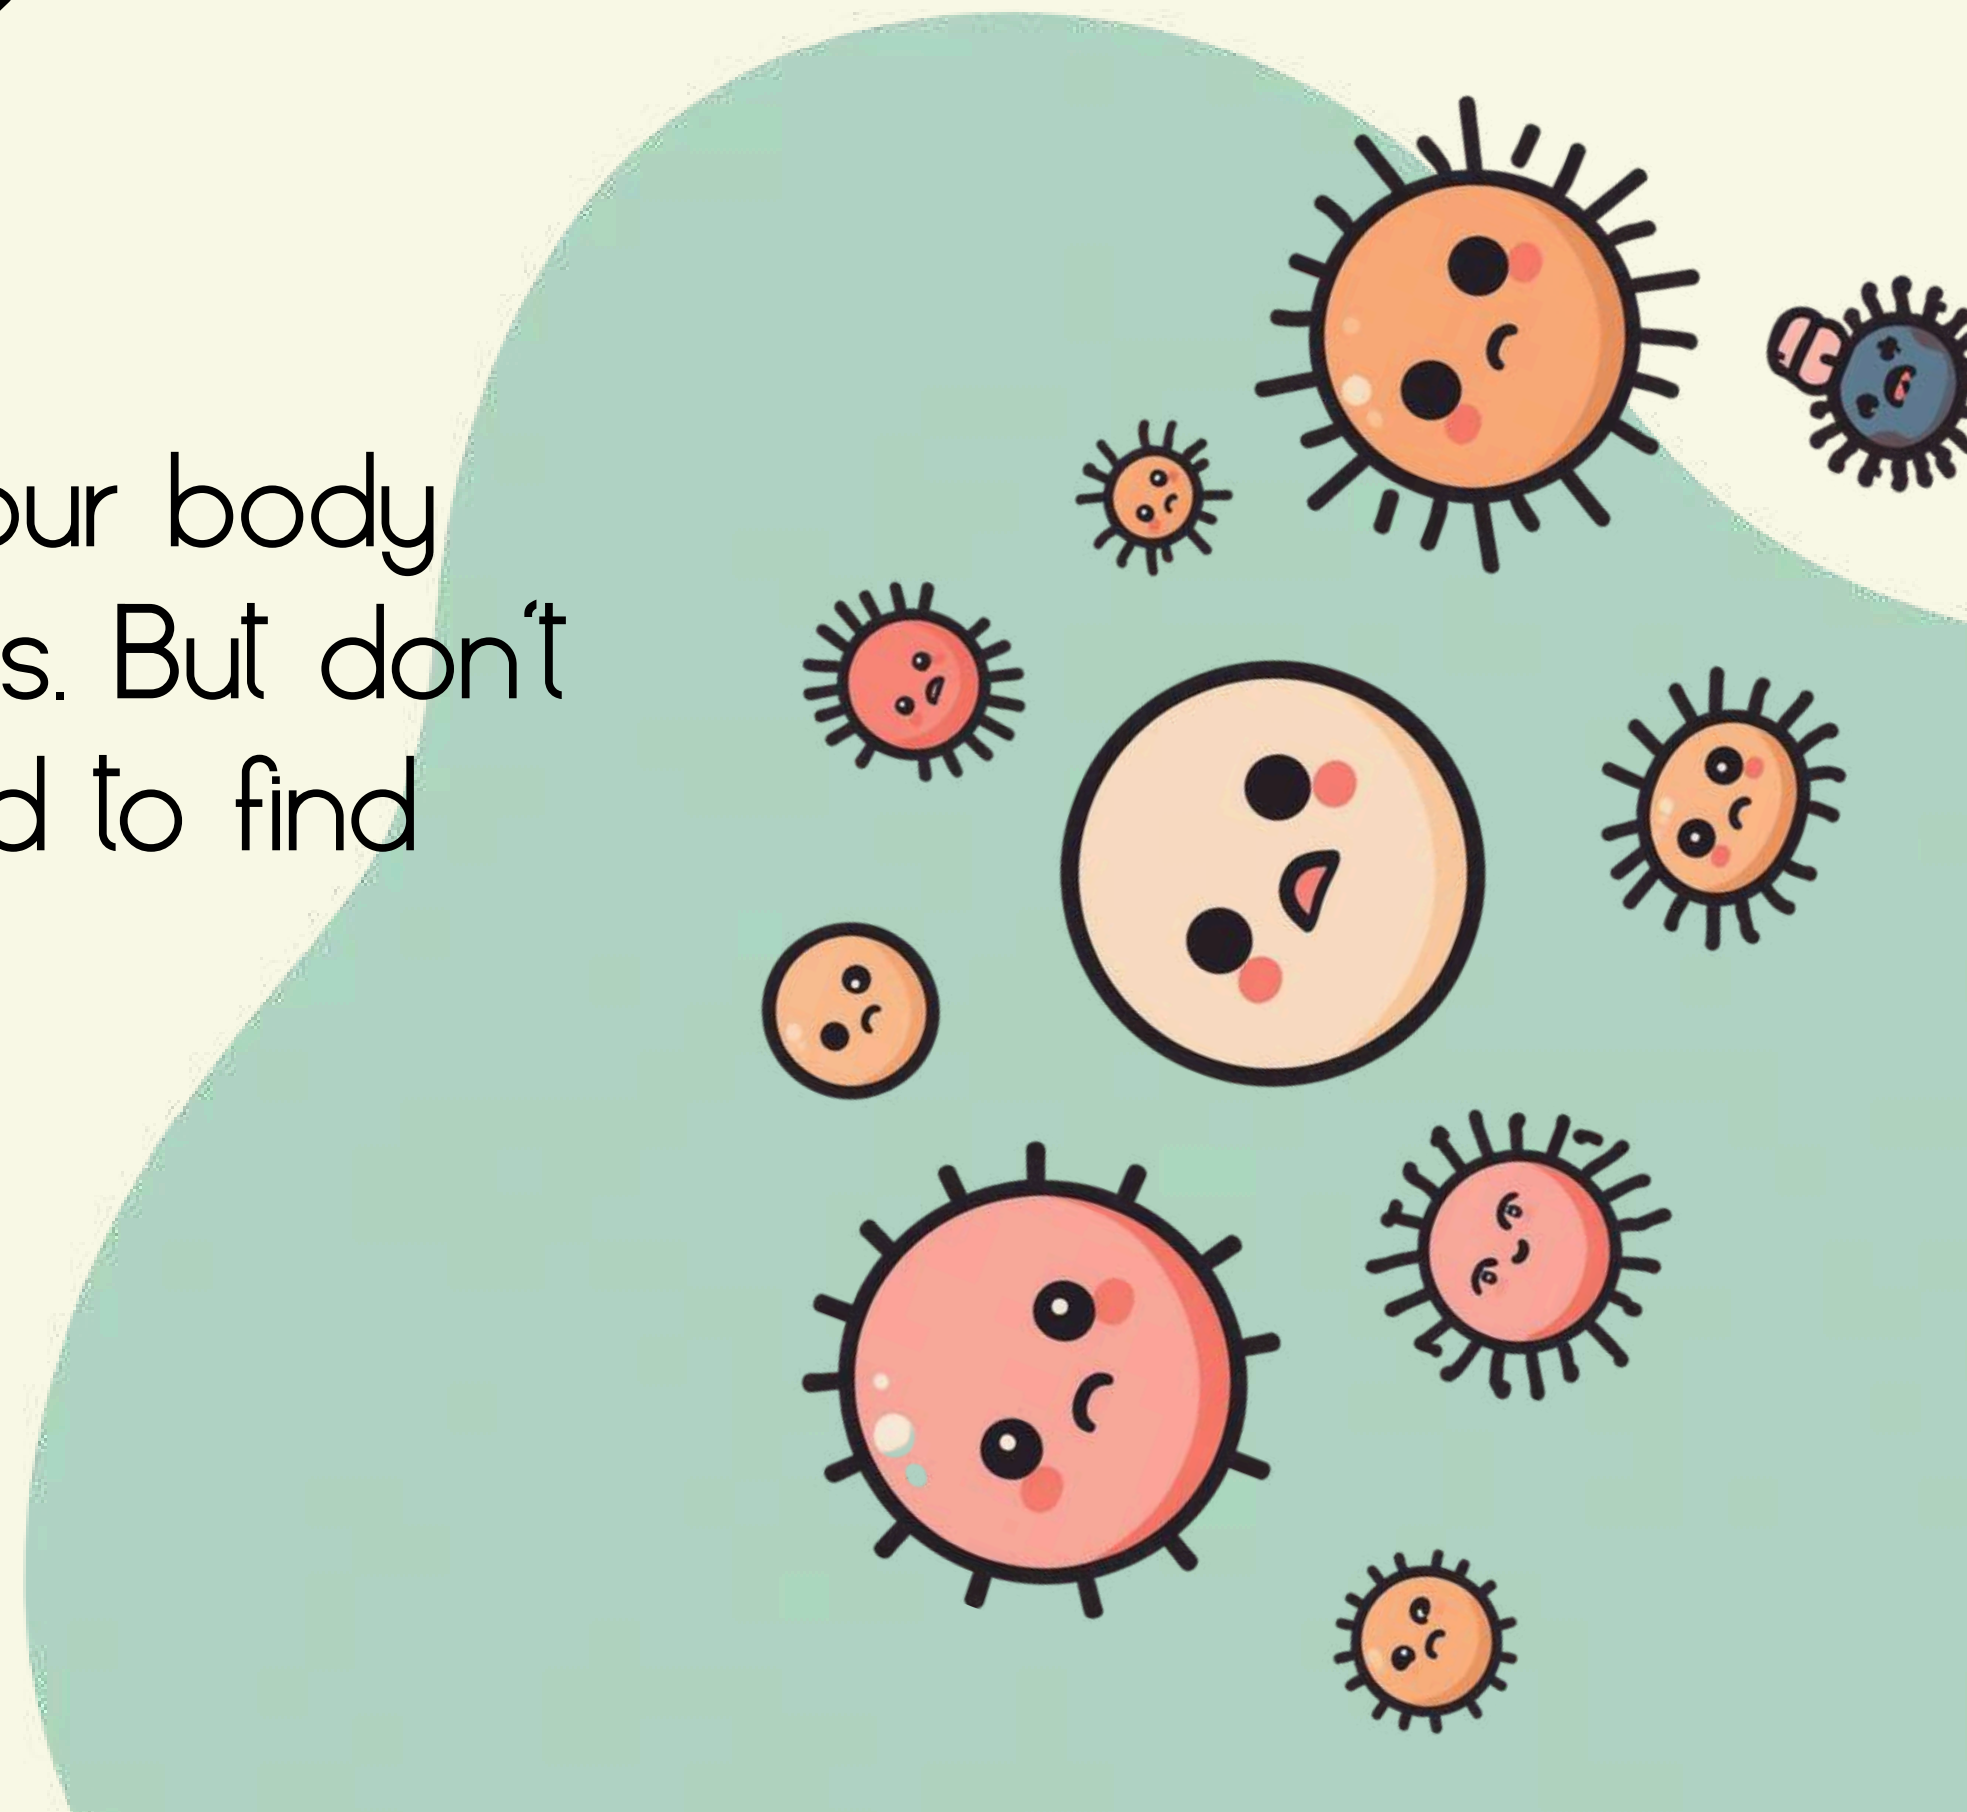

HOW DO DOCTORS USE X-RAYS?

X-rays are special pictures that show inside our bodies! Doctors use X-rays to see our bones and organs without opening us up. It's like having a superpower to look through skin! X-rays help doctors find broken bones, check our lungs, and keep us healthy.

WHAT IS CANCER?

Cancer is when some cells in our body grow too much and make lumps. But don't worry — doctors work very hard to find and treat cancer early!

FINDING CANCER WITH X-RAYS

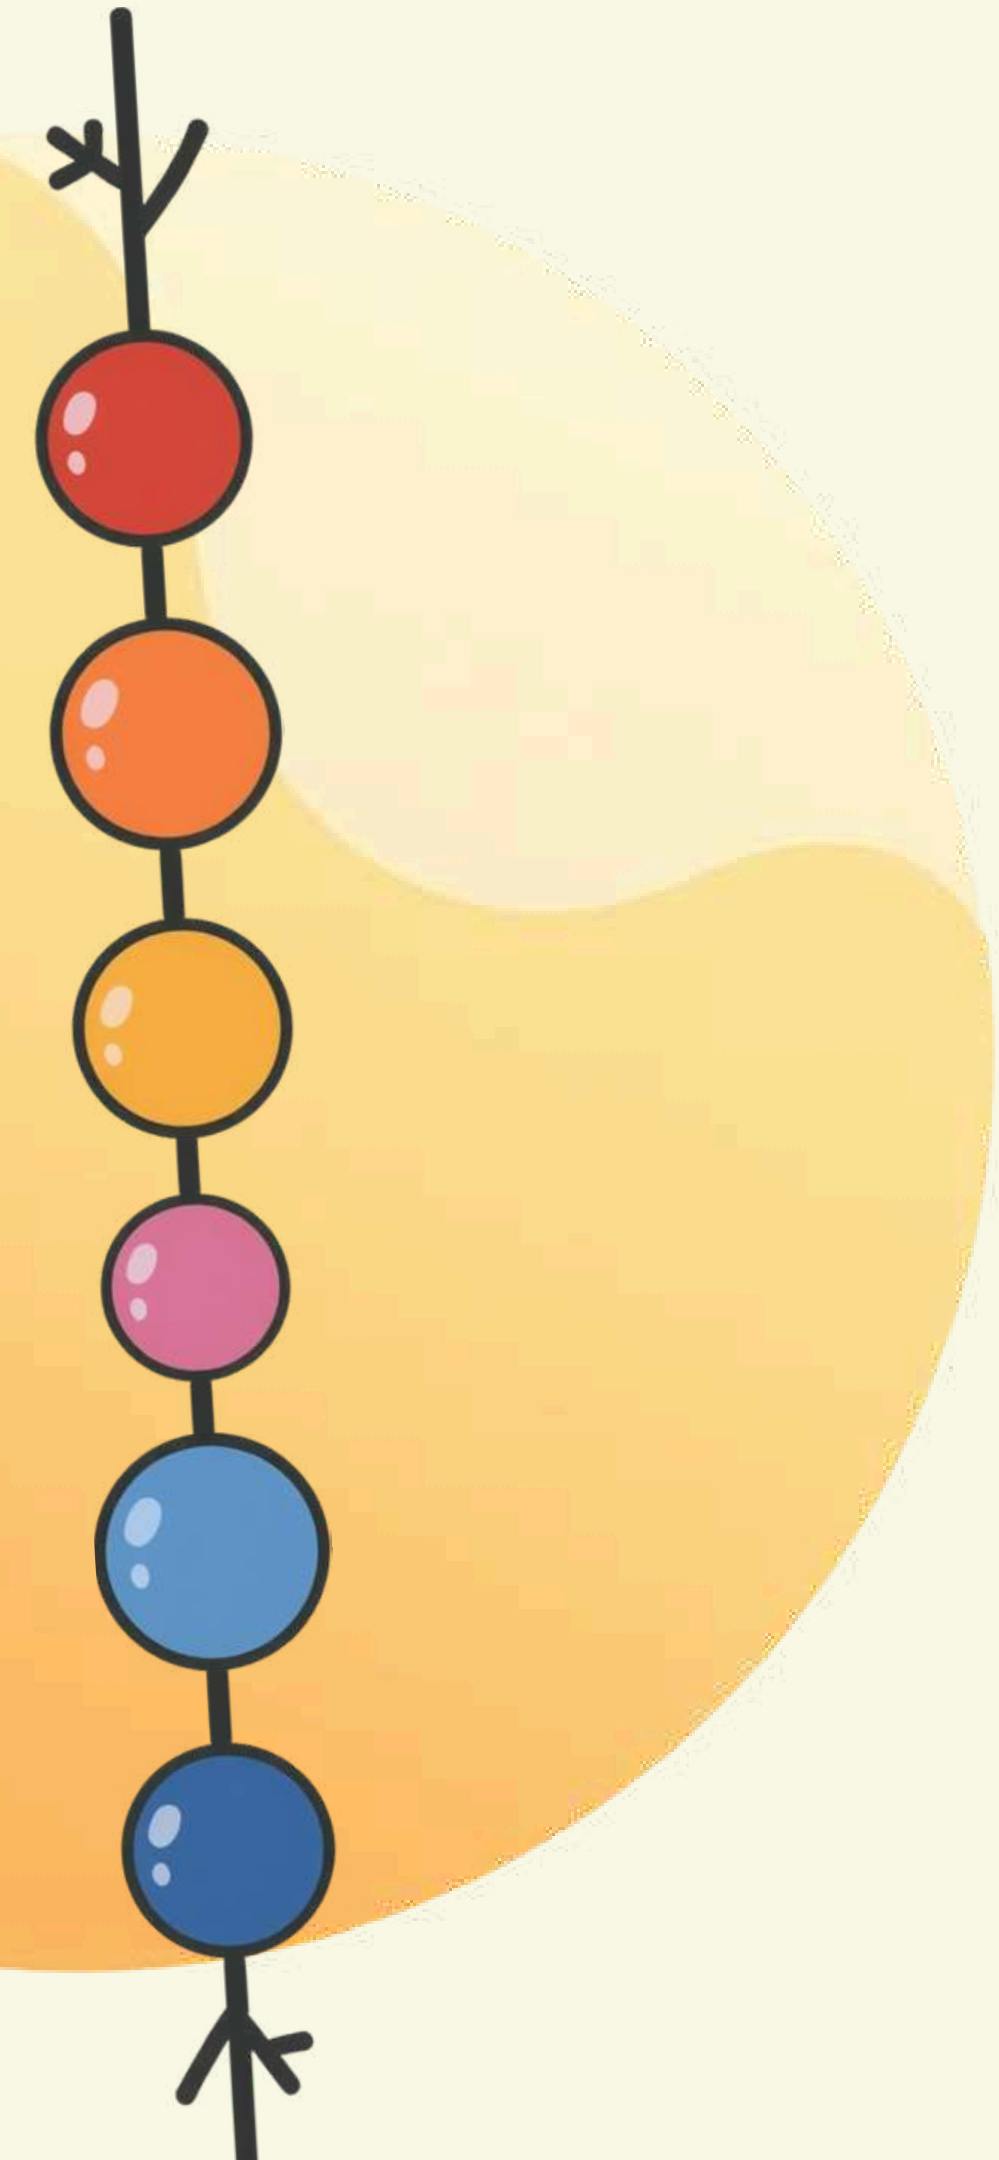

Doctors carefully look at X-rays to find signs of cancer. They study the pictures closely to spot anything unusual, like lumps or strange shapes. Finding cancer early helps doctors treat it better!

HOW AI HELPS DOCTORS

AI helps doctors find cancer faster and more accurately. Doctors work hard looking at many X-rays, but AI computers can quickly check them and spot problems!

AI IN ACTION: A SIMPLE STEP-BY-STEP

Step 1: AI looks at the X-ray picture

Step 2: AI spots unusual spots or shapes

Step 3: AI shows the doctor where to check

Step 4: Doctor makes the final decision

COOL FACT: AI SAVES LIVES!

AI can help doctors find cancer early, helping many people get better! When cancer is found quickly, doctors can start treatment sooner.

BENEFITS OF AI IN HEALTHCARE

Finds cancer early → helps people get treatment sooner

✦ Works fast → checks many X-rays quickly

● Helps doctors → makes fewer mistakes

Learns over time → gets better every day

CAN AI REPLACE DOCTORS?

Question: "Will AI take over doctors' jobs?"

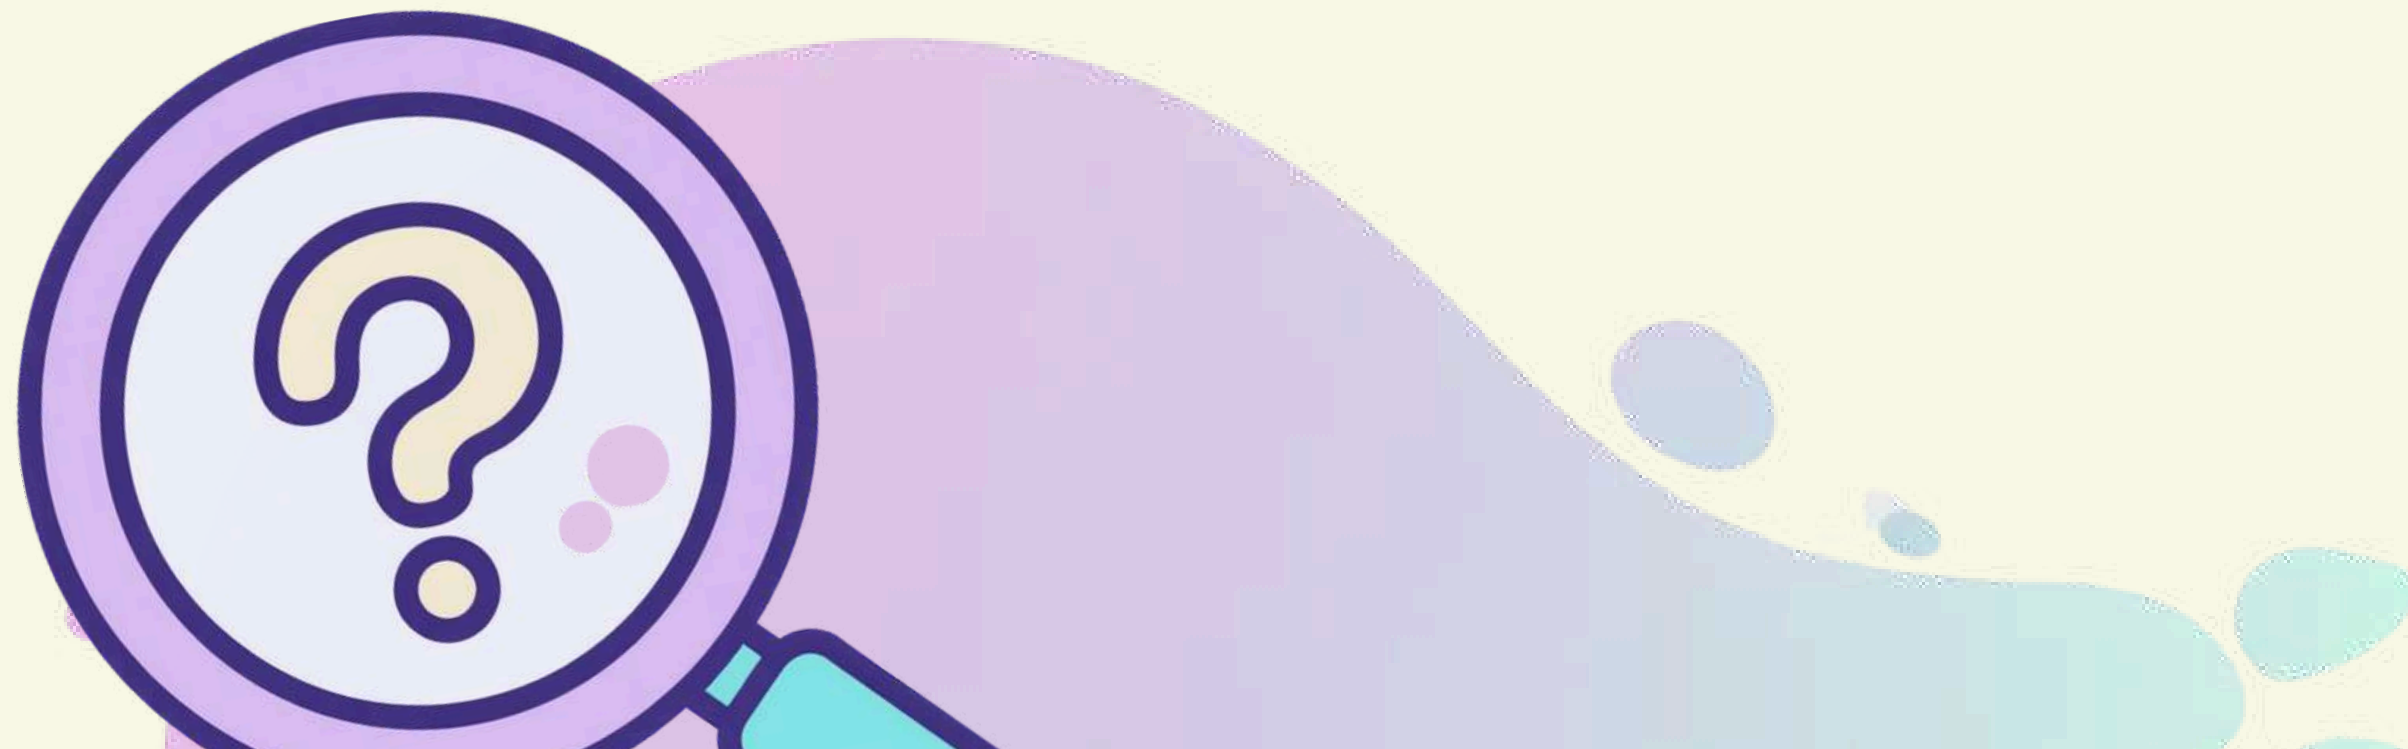

Answer: "No! AI helps doctors, but doctors make the final decisions. AI is like a smart helper that finds important things in X-rays, but only doctors can decide how to help patients feel better!"

IS AI ALWAYS RIGHT?

Question: "Can AI make mistakes?"

Answer: "Sometimes, yes! That's why doctors always check AI's work carefully. AI is a helpful tool, but humans make the final decisions about our health."

REAL-LIFE STORY: AI HELPING A PATIENT

Meet Riya, a 9-year-old girl from Mumbai. When she wasn't feeling well, doctors used AI to look at her X-rays. The AI spotted something tiny that needed attention. Thanks to AI and her caring doctors working together, Riya got help early and is now healthy and happy!

SUMMARY: AI HELPS KEEP US HEALTHY

AI is like a smart helper for doctors
It looks at X-rays to find cancer
early

AI and doctors work together to
save lives

You can learn about AI too!

BONUS: FUN AI QUIZ!

Can you guess how AI helps doctors? Let's find out!

1. What kind of pictures does AI look at to find cancer?

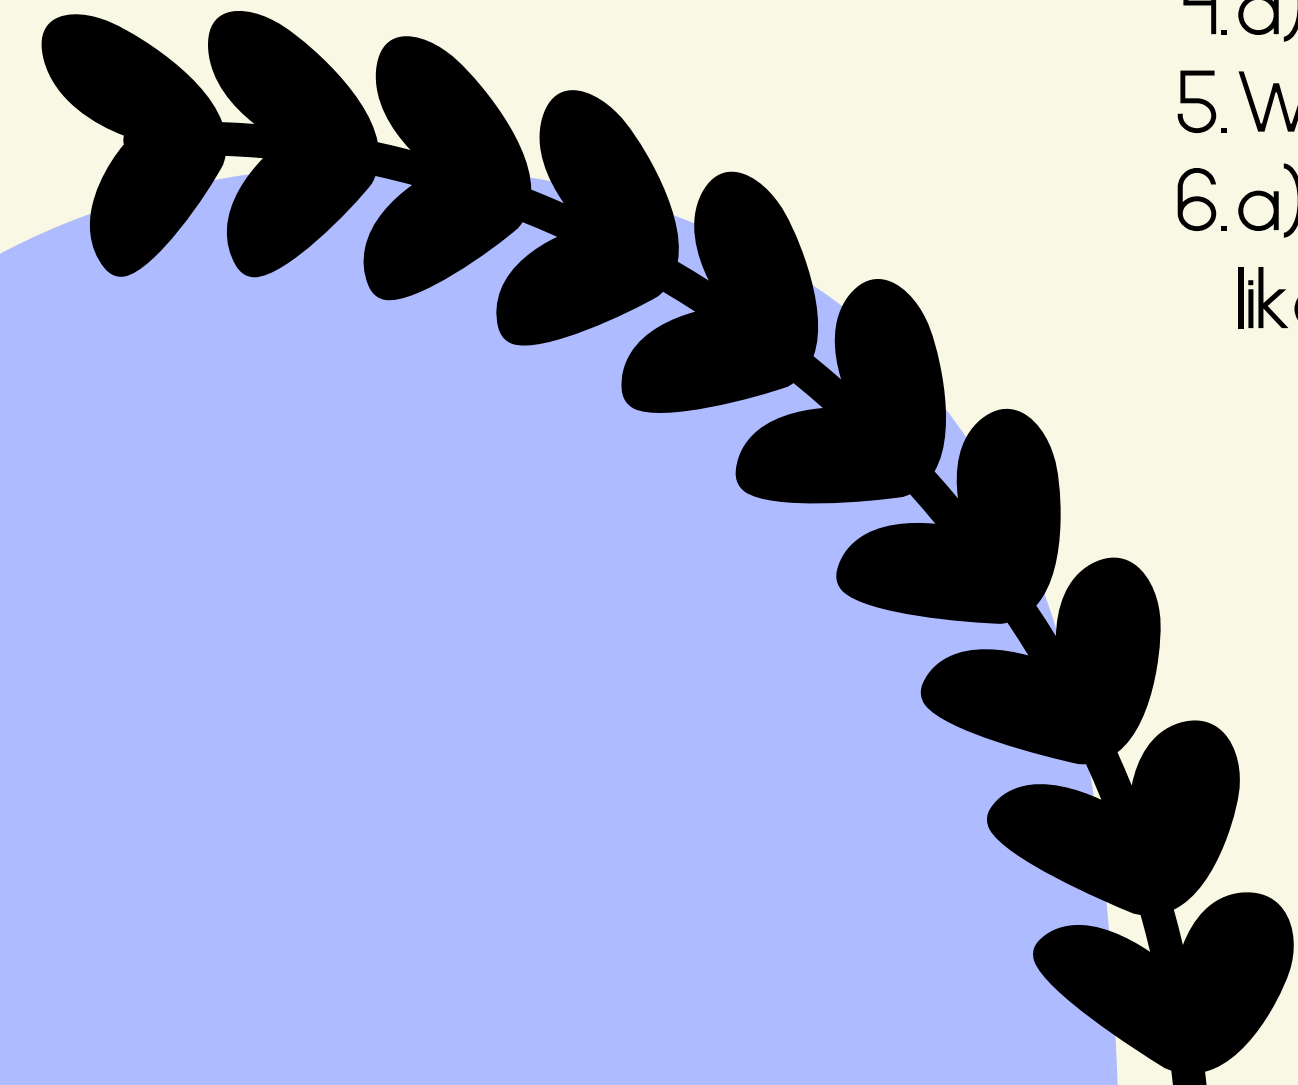

2. a) Selfies b) X-rays c) Paintings

3. Does AI replace doctors?

4. a) Yes b) No, AI helps doctors c) Maybe

5. Why is finding cancer early important?

6. a) It helps people get better faster b) It's not important c) Doctors like puzzles
